

Lindsey's Skyward™ Bald Cypress

Taxodium distichum 'Skyward' PPAF

Lindsey's Skyward™ is a naturally dwarf Taxodium that was selected in Oklahoma by Mike Lindsey. The dense, narrow spire has soft, rich-green foliage that is delightful to the touch. New growth in spring is leaf green, changing to a rich dark green in summer. By autumn, the fine, almost feathery needles change to an outstanding copper/cinnamon color and hold for weeks, before branchlets fall. In winter, beautifully tiered, upward-facing branches give the small tree added elegance and character, while the textured bronzy bark adds winter interest.

At 16 years in the originator's landscape, Lindsey's Skyward™ Bald Cypress has attained only 20 feet in height and 6 feet in width. If further reduction in size is required, the deciduous conifer can be kept even smaller and narrower with hard late-winter pruning.

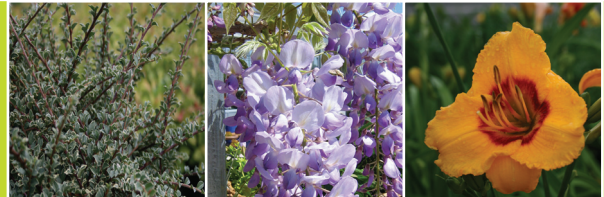

Known to thrive in full sun on moist soils, Lindsey's Skyward™ is widely adaptable for both northern and southern hot areas (U.S.D.A. Zones 5-9), and can also be grown under dry conditions. It has a non-aggressive root system with no surface roots or knees. This cultivar has never shown any sign of disease or insect infestation, and is tough, hardy, and exceedingly resistant to ice storm stress thanks to its strong wood and branch angles.

Companion Plants

Northern Borders™ Variegated Cotoneaster

Lavender Falls Wisteria

Kokomo Sunset™ Daylily

Key Features: *Low Maintenance
Year-round Interest
Disease and Insect Resistant*

Exposure: *Sun*

Height: *20 feet*

Width: *6 feet*

Growth Habit: *Dense, Narrow*

USDA Zone: *5*

Heredity: *Mike Lindsey,
Mustang, OK, US*

Great New Plants™
